Ningbo Kaisong Electric Appliance Co., Ltd.

About us

- 01 Extensive Industry Expertise
- 02 Advanced R&D Capabilities
- 03 Quality and Certification Assurance

Ningbo Kaison Electric Appliance Co., Ltd., established in 1998, occupies an area of 15,000 square meters with a standard factory building covering 20,000 square meters. It is located in Cixi City, Zhejiang Province, renowned as the “hometown of home appliances.” The area benefits from well-established surrounding industries and convenient logistics and transportation.

The company has a strong foundation in the field of commercial refrigeration equipment, boasting 15 years of experience in ice maker production and 5 years in commercial kitchen freezer manufacturing. With a team of skilled refrigeration engineers and a fully equipped refrigeration laboratory, the company has achieved ISO9001, ISO14001, and ISO45001 certifications. Additionally, it holds multiple national patents and has obtained international certifications such as FCC, ETL, CE, and CB for various products.

With an annual production capacity of 80,000 ice machines, the company specializes in high-end custom commercial refrigeration equipment. All products are crafted using premium components and exquisite craftsmanship. As an OEM/ODM production base for several well-known brands, the company manufactures over 200 models of commercial refrigeration equipment, including ice makers, display cabinets, freezers, workbench freezers, and wine cabinets. These products generate an annual export value of \$3 million USD.

The products are widely used in catering, milk tea shops, bars, KTVs, supermarkets, convenience stores, and research laboratories. They are best-sellers in both domestic and international markets, consistently earning high praise from customers. We warmly

Welcome to negotiate and explore cooperation opportunities!

Ice Maker Series Features

1. Stainless Steel Shell: Elegant, easy to clean, and built for durability.
2. High-Quality Components: Featuring top-brand parts for extended lifespan, efficiency, and energy savings.
3. Food-Grade Ice Storage: Made with materials that meet national safety standards.
4. Intelligent Microcomputer Control: Simple operation with reliable safety features.
5. Copper-Nickel Composite Evaporator: Quick ice production, energy-efficient, corrosion-resistant, and time-saving.

Features of Snowflake Granular Ice

- **Advanced Automated Control System:** Equipped with a computerized automatic control system to ensure seamless machine operation, self-diagnostics, and enhanced stability. This system also simplifies maintenance and servicing.
- **Rotary Ice-Making Technology:** Utilizes a rotating extrusion mechanism for efficient ice production. This method eliminates the need for separate ice releasing and crushing processes, saving time and energy while significantly reducing the cost of ice production.
- **Compact and Versatile Granular Ice:** The small and refined granular ice penetrates narrow gaps, enabling rapid cooling. Its soft texture is easy to chew, enhancing taste and freshness for a wide range of applications.
- **Diverse Applications:** Ideal for seafood displays, hot pot restaurants, Japanese cuisine establishments, and wine or champagne buckets. Additionally, it is widely used in medical and laboratory environments.

CRESCENTICE MACHINE SERIES

Weight: 8g
Water content: 2%

Features of Crescent Ice

- Crystal-Clear, Bubble-Free Design: Crescent ice boasts a transparent, bubble-free appearance that prevents clumping. It quickly cools beverages while adding an elegant visual appeal.

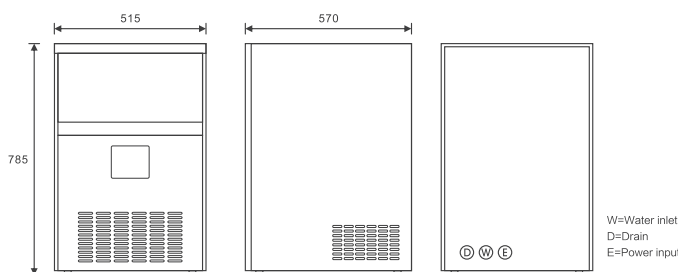

- Advanced Automated Control System: Equipped with a computerized automatic control system to ensure seamless machine operation, self-diagnostics, and enhanced stability. This system also simplifies maintenance and servicing.

- Durable Stainless Steel Ice Tray: Made entirely of stainless steel, the ice tray resists the effects of hard water or high mineral content, minimizing scale buildup. This ensures the ice remains hygienic and maintains its quality while reducing machine maintenance costs.

- Dual-Sided Flow Ice-Making: Features a vertical ice tray with water flowing over both sides to form ice cubes. This innovative design doubles efficiency by freezing water in a single flow cycle, conserving both water and energy.

Requirements for ice making machine operation

- Ambient temperature: 2~43°C
- Water inlet temperature: 2~38°C
- Water pressure: 0.13MPa~0.55MPa
- Condensing method: air-cooled or water-cooled

Installation space requirements

- The top and sides of the machine should be at least 25cm away from the wall, the back should be at least 12cm away, and there should be no obstruction at the air outlet of the air-cooled type.

24-hour maximum ice production test conditions

- Room temperature 20°C, water temperature 10°C

FLAKE ICE MACHINE SERIES

Features of Flake Ice

- Flake ice is formed at the lowest temperature, with less than 2% water content, extremely dry, not easily melted, and has a longer freshness preservation time.
- The evaporator is made of 304 stainless steel material, formed in one piece, and has a low failure rate.
- Flake ice is composed of irregular ice flakes with adjustable thickness of 1-2mm. It is suitable for industrial, fish, seafood product displays, logistic transportation, flour mixing and cooling, and other applications.
